Suntech unveils rollout management system

Staff writer | September 20, 2012
360 View

Suntech has introduced its SunVizion Network Rollout Management system, specifically designed to support a telecommunication network rollout processes.

The solution speeds up network rollout, reducing capex and improving key business processes related to network built-out and maintenance.

Suntech's solution organizes and automates all processes associated with network rollout significantly reducing the time and cost of the entire project.

The system can detect and eliminate possible abnormalities and frauds, by for example pointing out significant differences between costs of realization of the same tasks in different departments or regions.
